

# Enterprise Solutions: Backup

## Continuous Backup with CrashPlan PRO

---

Protect every computer in the enterprise with CrashPlan PRO. IT professionals can now easily manage backup for ten or ten thousand computers regardless of location with a single solution, reducing cost and complexity.

Mission critical data in the enterprise is not being backed up. Increasing numbers of employees using laptops combined with out-dated file server based backup strategies put companies at risk for data loss.

Traditional backup solutions offer piece-meal strategies for large, multi-platform environments that provide inadequate protection while costing more to maintain.

IT support staff are often required to provide manual backup and data restoration tasks on top of their already full workload.

Enterprise backup solutions must meet the challenges of today's diverse, globally distributed workplace that needs continuous, reliable protection while lowering IT support costs.

### **Protect Executive and Mobile Workforce Laptops 24/7**

Laptop data loss is a serious problem facing companies of all sizes. Executive and mobile workforce laptops often contain extremely valuable information that requires continuous backup protection.

Backing up laptops is challenging. Having less memory, CPU, and I/O performance than desktops and servers, laptops also operate in a wide variety of network conditions.

CrashPlan PRO meets these challenges with continuous backup that operates quietly in the background, allowing users to work without interruption. File changes are backed up in real-time ensuring that backup data is always up-to-date. CrashPlan PRO also works securely over the Internet, providing backup for laptops and remote desktops regardless of location.

### **CrashPlan PRO**

CrashPlan PRO is a high performance, cross-platform backup solution that provides continuous protection onsite, offsite and online for the enterprise.

### **Key Benefits**

Protect executive and mobile workforce laptops 24/7

Reduce multi-platform support cost and complexity

Ensure disaster recovery protection

Decrease IT workload with end-user file restoration

Centrally manage company backup policies

Save money, simplify support and gain complete data protection

**Reduce Multi-Platform Support Cost and Complexity**

IT now needs to support multiple platform environments that include Macs, Windows, and Linux. Every machine has data that, if lost, will result in lost productivity and therefore requires backup.

CrashPlan PRO runs equally well on Macs, Windows, Linux and Solaris, consolidating multi-platform backup into a single, unified software solution. Support costs go down, user satisfaction levels go up, and the company gets full backup protection on all of its platforms.

**Ensure Disaster Recovery Protection**

Complete backup protection includes redundant onsite and offsite backup destinations to protect against fire, theft and natural disaster scenarios. Designed with multiple backup destination support, CrashPlan PRO provides easy management and deployment of onsite and offsite backup. A computer protected with CrashPlan PRO can now have redundant backup to multiple destinations that you control.

**Decrease IT Workload with End-User File Restoration**

Moving support functions like data restoration to the end-user results in more efficient use of IT resources. CrashPlan PRO gives end-users the ability to restore their own files. They can quickly recover what they need when they need it, reducing IT workload and increasing productivity. A user can easily restore an unintentionally deleted file without the cost associated with contacting IT support.

Valid data restoration requires verification of backup data integrity. With CrashPlan PRO, backup data is automatically verified and self-heals if necessary. Data is always ready for restoration when it's needed.

**Centrally Manage Company Backup Policies**

Backup policies ensure the right level of protection across the whole company, while controlling data storage costs. A company may require varying levels of required backup protection for different departments or individual computers.

CrashPlan PRO provides centralized backup policy management in an easy-to-use web-based administration console. Group and individual computer settings control when and how backup is run, which files to backup, how much storage is allocated and much more. Centralized backup policy management allows changes to be implemented quickly and in a flexible manner.

**Scale with Company Growth**

An enterprise backup solution must meet a company's need for data growth. CrashPlan PRO's capacity growth features include:

- Dynamic data storage via NAS mount points
- Handles 10-10,000 computers on a single server
- Master / Slave configurations support any number of additional servers over LAN and WAN

**Save Money, Simplify Support and Gain Complete Data Protection**

Choosing the right enterprise backup solution saves time and money in addition to increasing IT staff efficiency. A backup solution utilizing CrashPlan PRO is an investment in IT infrastructure that provides unparalleled laptop protection, protects against disaster, and lowers IT support costs in a single, easy-to-manage product.
